Abstract: Islamic educational institutions face complex challenges in the globalization era, including technological disruption, intense competition, and demands for adaptive yet values-based graduates. Strategic planning offers a potential solution, yet its integration with Islamic educational values remains underexamined. This study examines how strategic planning can address development challenges faced by Islamic educational institutions in the globalization era. A qualitative library research method was employed, analyzing 45 academic sources (books, peer-reviewed articles, policy documents) using thematic content analysis. The analytical framework integrated SWOT analysis with Islamic educational principles. Findings indicate that strategic planning addresses five key challenges: (1) human resource quality through continuous competency-based training; (2) institutional governance through systematic planning and evaluation; (3) Islamic value integration through curriculum and co-curricular alignment; (4) funding sustainability through resource optimization and partnerships; (5) graduate competitiveness through 21st-century skills development. SWOT analysis emerged as a relevant tool for context-sensitive planning. This study integrates modern strategic management concepts (SWOT, performance measurement) with Islamic educational values into a comprehensive conceptual framework. Policymakers and institutional leaders should implement systematic, values-based strategic planning to enhance institutional competitiveness while preserving Islamic identity.

Keywords: Globalization Era, Islamic Educational Institutions, Strategic Planning

A. Introduction

Islamic education constitutes a fundamental component of the educational system, characterized by the integration of Islamic values across cognitive, moral, spiritual, and social dimensions. This integrative approach aims to foster holistic human development and shape individuals with strong intellectual capacity and moral character (Azra, 2019). In practice, Islamic educational institutions are expected not only to transmit knowledge but also to function as centers for character formation grounded in Islamic teachings. However, in the era of globalization, Islamic

educational institutions face increasingly complex challenges. Globalization accelerates the flow of information, technology, and knowledge across borders, creating opportunities for innovation and access to diverse learning resources (OECD, 2018). At the same time, it intensifies competition among institutions and introduces external cultural influences that may weaken local and religious values (Ahmed, 2024; Giddens, 2003). This dual impact places Islamic educational institutions in a critical position: they must adapt to global demands while maintaining their distinctive Islamic identity.

In response to these challenges, strategic planning has been widely recognized as an essential managerial tool for improving institutional effectiveness. Strategic planning enables organizations to define clear visions, align internal resources, and respond systematically to environmental changes (J. M. Bryson, 2018; George et al., 2019). Empirical studies further demonstrate that institutions implementing strategic planning tend to achieve better governance, accountability, and long-term sustainability (J. Bryson et al., 2017; Bush, 2020). Despite these advancements, most existing studies discuss strategic management and Islamic education separately, without sufficiently integrating the two perspectives.

This condition reveals a significant research gap: the lack of a comprehensive framework that integrates strategic planning theory with the values and principles of Islamic education (Machali, 2018). As a result, there is still limited understanding of how strategic planning can be contextually applied in Islamic educational institutions to address global challenges while preserving Islamic identity. This gap highlights the urgency of developing an integrative approach that positions strategic planning not merely as a technical or managerial instrument, but as a value-based framework rooted in Islamic teachings. Therefore, this study proposes a conceptual synthesis that combines modern strategic management with Islamic educational values. This integrative approach is expected to provide a more contextual and applicable framework for managing Islamic educational institutions in the global era, particularly in achieving a balance between quality improvement, institutional competitiveness, and the preservation of Islamic identity.

Based on the above discussion, this study addresses the following research questions: RQ-1 What challenges are faced by Islamic educational institutions in the era of globalization? RQ-2 How can strategic planning, particularly SWOT analysis, address these challenges? RQ-3 Which components of strategic planning (curriculum, co-curricular, extracurricular, and teacher development) are most critical for institutional transformation? By examining these questions, this study aims to enrich the discourse on the sustainable strategic management of Islamic educational institutions and to provide practical insights for stakeholders in transforming Islamic educational institutions into adaptive, competitive agents of change that remain grounded in Islamic values in the global era.

B. Methods

This study employs a qualitative approach using library research to conceptually analyze the role of strategic planning in the development of Islamic Educational Institutions (LPI) in the global era. This approach was chosen because it provides in-depth understanding through the interpretation of various scientific sources and focuses on strengthening the theoretical framework and synthesizing experts' ideas without involving field data (Zed, 2025). Through this approach, the study seeks to integrate modern strategic management theory with Islamic educational values in a contextual manner. The data sources consist of primary and secondary literature, such as academic books, indexed journal articles, and educational policy documents, selected based on relevance, credibility, and recency (Sugiyono, 2013). Data collection was conducted through a literature review by identifying, classifying, and organizing relevant literature on strategic planning and management in Islamic education. Data analysis employed a descriptive-analytical content analysis method through the stages of data reduction, categorization, synthesis, and drawing conclusions (Miles et al., 2014). Validity was ensured through source triangulation by comparing various perspectives in the literature. This study contributes to the development of an integrative conceptual framework that positions strategic planning as an instrument of institutional transformation based on Islamic values in the face of educational globalization.

C. Results and Discussion

The Concept of Strategic Planning in Education

Strategic planning in the field of education is a systematic process designed to determine the long-term direction of an institution's development, taking into account the dynamics of both internal and external environments. In the context of globalization and technological disruption, educational institutions are required to have a clear vision and adaptive strategies in order to survive and thrive competitively. International research indicates that educational institutions that implement strategic planning based on environmental analysis tend to demonstrate more effective and sustainable organizational performance (J. M. Bryson, 2018). This underscores that strategic planning is not merely an administrative document but serves as an instrument for institutional transformation.

From an educational management perspective, strategic planning encompasses the formulation of a vision, mission, and strategic objectives; SWOT analysis; policy formulation; program implementation; and ongoing evaluation. A study by Bryson et al. (2017) confirms that public sector organizations that consistently implement strategic planning are able to enhance accountability and performance effectiveness. In the context of higher education, George et al. (2019) also found that strategic planning contributes to enhancing institutional capacity and the global

competitiveness of universities. These findings indicate that a strategic approach is a fundamental necessity in the governance of modern educational institutions.

In Indonesia, the urgency of strategic planning in education has also been emphasized in various national studies. Yusril et al. (2023) concluded that the implementation of strategic planning in Islamic educational institutions has a significant impact on improving organizational quality and the effectiveness of achieving the institution's vision. Research by A.M Kuntum (2025) shows that Islamic educational institutions with integrated strategic planning documents are better able to respond to the demands of globalization compared to institutions that have not yet systematically implemented strategic management. These findings reinforce the argument that strategic planning serves as a framework for enhancing the competitiveness of educational institutions.

Furthermore, an international study by Poister (2010) emphasizes that effective strategic planning must be linked to performance measurement and continuous evaluation in order to produce a tangible impact on the quality of public services, including education. This aligns with national research by Imam Machali (2018), which states that education management based on strategic planning enables institutions to optimize resources, improve governance, and enhance service quality sustainably. Thus, both international and national literature indicate that strategic planning is an essential managerial approach to addressing educational challenges in the global era.

Conceptually and empirically, strategic planning in the field of education serves as a crucial foundation for building adaptive, accountable, and competitive institutions. The integration of institutional vision, environmental analysis, human resource development, and a measurable evaluation system is key to its successful implementation. Referring to various international and national studies, it can be concluded that strategic planning is not merely an administrative necessity but a fundamental strategy for sustainable educational development.

Challenges in Managing Islamic Educational Institutions in the Global Era

Islamic educational institutions (LPI) in the global era face increasingly complex challenges amid technological advancements, globalization, and rapid social change. These conditions require LPI to be able to adapt not only in terms of learning but also in institutional management systems. Therefore, the management of LPI needs to be directed toward a more strategic, systematic, and quality-oriented approach for sustainable improvement (George et al., 2019; OECD, 2018).

1. Human Resource (HR) Quality Challenges

One of the main challenges in managing LPI is the quality of human resources,

particularly teachers and educational staff. Teachers are expected not only to master the subject matter but also to possess pedagogical and professional skills, as well as digital literacy. However, in reality, there remains a competency gap, particularly regarding the use of technology in teaching. Research shows that the success of educational transformation is greatly influenced by the readiness of human resources to adapt to change (Harris & Jones, 2020). Therefore, the development of teachers' competencies must be planned on an ongoing basis in order to improve the quality of learning at LPI (A.M, 2025).

2. Institutional Governance Challenges

The next challenge is institutional governance, which has not yet reached a fully professional level. Some LPIs still face obstacles in strategic planning, financial management, and evaluation systems that are not yet optimal. This results in the institutions' objectives not being achieved as effectively as they could be. In this context, the implementation of strategic management is essential for improving institutional performance. Educational organizations that are managed in a planned and strategy-driven manner tend to be better able to adapt to change (J. M. Bryson, 2018).

3. The Challenge of Integrating Islamic Values

Globalization brings with it diverse values and cultures that do not always align with Islamic teachings. This poses a challenge for LPI in preserving its Islamic identity while remaining open to scientific advancements. Therefore, LPI needs to integrate Islamic values into the entire educational process, both in learning and in the institutional culture. This integration is essential so that students not only possess general knowledge but also exhibit Islamic ethics and character (Tan, 2017).

4. Funding and Sustainability Challenges

Funding issues also pose a significant challenge. Limited funding sources often hinder the development of facilities, infrastructure, and learning innovations at LPI. At the same time, demands for educational quality are on the rise. The ability to manage resources effectively and efficiently is key to the success of educational institutions in addressing these challenges (Bush, 2020).

5. The Challenge of Graduate Competitiveness

The final challenge is the low competitiveness of graduates in the global marketplace. LPI graduates are expected not only to possess religious understanding but also 21st-century skills such as critical thinking, creativity, and digital literacy. The OECD (2018) emphasizes that mastery of these skills is crucial for navigating global competition. Therefore, LPI needs to adapt its educational system to produce

competent and well-rounded graduates.

Based on the above discussion, it is clear that the challenges of managing Islamic educational institutions in the global era encompass various interrelated aspects, ranging from the quality of human resources, institutional governance, the integration of Islamic values, and funding to the competitiveness of graduates. This indicates that more focused and strategy-based management is needed so that these institutions can improve their quality and remain relevant in the face of changing times.

The Role of Strategic Planning in Addressing the Challenges of Islamic Education Development in the Global Era

1. Strategic Planning Based on SWOT Analysis

Strategic planning for the development of Islamic Educational Institutions (LPI) in the global era requires a comprehensive analytical approach to effectively respond to the dynamics of change. One of the most relevant tools used is SWOT analysis (Strengths, Weaknesses, Opportunities, Threats), which serves to systematically identify the internal and external conditions of the institution. This analysis not only helps in understanding the institution's strategic position but also serves as the foundation for formulating effective and sustainable development policies and programs (Gürel & Tat, 2017).

Strength

The primary strength of LPI lies in its strong foundation of Islamic values, which serve as both a defining characteristic and a competitive advantage over general educational institutions. These religious values are reflected in the organizational culture, curriculum, and social interactions grounded in Islamic morals and ethics. Additionally, many LPI institutions adopt the pesantren culture, which emphasizes character development, discipline, and student independence. Another strength is the high level of social legitimacy within the Muslim community, granting LPI a strong foundation of trust as an institution dedicated to the moral and spiritual development of the younger generation. According to Azra (2019), Islamic education plays a strategic role in shaping individuals who are not only intellectually intelligent but also possess spiritual depth and moral integrity. This strength serves as a vital asset in addressing the challenges of globalization, which tends to prioritize materialistic aspects.

Weaknesses

On the other hand, LPI also faces various internal weaknesses that need to be addressed through sound strategic planning. One of the main weaknesses is the limited human resources, particularly in terms of teachers' professional competencies

and digital literacy. Many educators are not yet fully capable of integrating technology into the learning process, thereby hindering educational innovation. Additionally, weaknesses can be found in institutional management, which remains conventional and lacks adaptability to change. A management system that is not yet data-driven, coupled with a lack of a culture of evaluation and long-term planning, presents a distinct challenge. Machali and Hidayat (2021) emphasize that the management of Islamic education must transform toward a more modern and strategic approach to sustainably enhance the quality and competitiveness of educational institutions.

Opportunity

The era of globalization and the advancement of digital technology have opened up various strategic opportunities for the development of LPI. The digitization of education enables the institution to access a wider range of learning resources, develop online learning systems, and improve management efficiency through the use of information technology. Additionally, growing public awareness of the importance of values-based education presents an opportunity for LPI to strengthen its presence.

The globalization of education also fosters international collaboration, academic exchange, and the adoption of best practices from various countries. In this context, LPI has the opportunity to develop a curriculum that is more adaptive and globally oriented without compromising its Islamic identity. George et al. (2019) state that organizations capable of strategically leveraging external opportunities will possess a higher competitive advantage in navigating environmental changes.

Threat

Despite its many opportunities, LPI also faces a number of significant external threats. One of these is increasing competition from modern educational institutions that offer more comprehensive facilities, international curricula, and more advanced technology-based learning approaches. This could influence public preferences when choosing educational institutions for their children. Additionally, the tide of globalization carries the potential for the secularization of education, which could erode religious values if not properly anticipated. Another challenge is the rapid evolution of workforce demands, which require graduates to possess adaptive, creative, and technology-based skills. Without proper strategic planning, LPI risks falling behind and losing its relevance within the global education system (Andrews et al., 2009).

Implementation of Strategic Planning in Curriculum Development

Strategic planning plays a crucial role in the curriculum development of Islamic Educational Institutions (LPI), particularly in addressing the increasingly complex demands of educational globalization. The curriculum is no longer viewed merely as

a set of subjects, but rather as a strategic instrument for holistically shaping students' competencies, encompassing intellectual, spiritual, and social aspects, as well as 21st-century skills. Therefore, the implementation of strategic planning in curriculum development must be directed toward the integration of Islamic values with the demands of modernity in a balanced and sustainable manner (Bahri, 2017).

1. Integration of the Islamic Curriculum and the Modern Curriculum

One of the key aspects in the development of the LPI curriculum is the integration of the Islamic curriculum and the modern curriculum. This integration aims to eliminate the dichotomy between religious studies and general studies, so that students not only excel academically but also possess a strong spiritual and moral foundation. From an Islamic educational perspective, knowledge originates from Allah SWT; therefore, there is no essential separation between worldly and spiritual knowledge.

Azra (2019) emphasizes that the modernization of Islamic education must be carried out without eroding its Islamic identity, but rather by integrating Islamic values into all aspects of learning. Curriculum integration can be implemented through the development of instructional materials that link scientific concepts with Islamic values, the use of a values-based contextual learning approach, and the instillation of Islamic ethics in every educational process.

Strategically, this integration also requires careful planning, ranging from formulating the curriculum vision and structuring subjects to developing innovative learning methods. Without systematic planning, curriculum integration risks becoming merely symbolic and having no significant impact on the character development of students (B, 2021).

2. Adapting to Global Needs

In addition to integrating values, the development of the LPI curriculum must also be adaptive to ever-evolving global needs. The era of globalization and the digital revolution demands that students possess new competencies, such as digital literacy, critical thinking, creativity, communication, and collaboration. Therefore, strategic curriculum planning must accommodate the strengthening of 21st-century skills as an integral part of the learning process.

The use of information technology in education is an important form of adaptation. LPI needs to develop a digital-based curriculum, such as the use of e-learning, blended learning, and interactive learning platforms that support the effectiveness of the teaching and learning process. In addition, proficiency in foreign languages, particularly English and Arabic, is also a strategic necessity for enhancing students' global competitiveness.

According to Trilling & Fadel (2012), education in the 21st century must be able to equip students with life and career skills relevant to the times. In this context, LPI has the opportunity to develop a curriculum that is not only locally oriented but also has a global perspective without losing its Islamic identity. This aligns with Tilaar (2004) perspective, which emphasizes the importance of education capable of responding to global changes in a critical and constructive manner.

3. Strategic Planning for Co-Curricular Activities

Strategic planning in Islamic Educational Institutions (LPI) does not focus solely on the formal curriculum but also encompasses co-curricular activities as academic support. These activities play a crucial role in deepening students' understanding of subject matter and developing critical and analytical thinking skills. Therefore, co-curricular activities must be systematically designed to align with learning objectives (B, 2021).

Strengthening academic support activities can be achieved through various programs such as scientific studies, Islamic discussions, study clubs, and project-based learning. Additionally, participation in academic competitions serves as a key strategy to enhance students' motivation and competitiveness. These activities have been proven to foster 21st-century skills, such as critical thinking, communication, and collaboration (Trilling & Fadel, 2012). In the context of Islamic education, co-curricular activities must also integrate Islamic values. For example, scholarly studies that link scientific knowledge with Islamic teachings, or discussions that foster both a scientific and religious mindset. This is important so that students not only excel academically but also possess a strong Islamic character (Azra, 2019).

To be effective, co-curricular activities need to be planned continuously, from goal setting and program implementation to evaluation. Thus, these activities are not merely supplementary but become a strategic component in improving the quality of education at LPI.

4. Strategic Planning for Extracurricular Activities

Strategic planning for extracurricular activities plays a crucial role in shaping the character of students at Islamic Educational Institutions (LPI). These activities serve not merely as a supplement but as a primary means for fostering moral values, leadership, and social skills that are not fully acquired through formal learning. In the context of contemporary Islamic education, character development is a primary focus that must be integrated into all educational activities, including extracurricular activities (Suryani & Dewi, 2024).

Character development through extracurricular activities can be achieved by instilling values such as discipline, responsibility, cooperation, and leadership. Programs such

as Islamic Scouting, Quran memorization, and student organizations serve as strategic tools in shaping students' personalities to be morally upright and self-reliant. Research indicates that Islamic education in the global era must be able to internalize moral values in practical application to remain relevant to the times (Muwahid et al., 2026).

In addition, extracurricular activities can also serve as a means of integrating Islamic values with 21st-century skills. For example, student organizations not only foster leadership but also communication and collaboration, while Quran memorization programs can be developed using innovative, technology-based approaches to enhance students' motivation to learn. This aligns with the evolution of the Islamic education curriculum, which is now more adaptable to digitalization and global needs (Maharani, 2025).

For extracurricular activities to be effective, systematic strategic planning is required, ranging from goal formulation and program implementation to continuous evaluation. Planned management will ensure that extracurricular activities are not merely routine but have a tangible impact on the holistic development of students' character and competencies.

5. Strategic Planning in Teacher Development

Strategic planning in teacher resource development is a key factor in improving the quality of Islamic Educational Institutions (LPI). Teachers do not merely serve as content deliverers but also as mentors, role models, and agents of value transformation (Suci et al., 2025). Therefore, teacher development must be systematically designed to address the demands of education in the global era.

One of the main aspects of strategic planning is continuous teacher training. These training programs need to be tailored to actual needs, such as learning innovations, the use of technology, and the strengthening of teaching methodologies. Targeted training will enhance teacher professionalism and have a direct impact on the quality of classroom learning. According to Sartika (2024), continuous professional development for teachers is a crucial factor in improving the effectiveness of learning and student learning outcomes.

Furthermore, improving pedagogical and digital competencies has become an urgent need in the era of globalization (Fahmi et al., 2025). Teachers are expected not only to master the subject matter but also to manage the learning process creatively and adaptively by utilizing digital technology. The integration of technology into learning, such as the use of e-learning and interactive media, can enhance student engagement and the effectiveness of the teaching-learning process. This aligns with the demands of 21st-century skills, which emphasize the importance of digital literacy in the field of education (Murniyati & Wiwik, 2025). On the other hand, teacher development at

LPI must remain grounded in the integration of Islamic values into the learning process. Teachers do not merely transfer knowledge but also instill moral values and spirituality in every educational process (Maulansyah et al., 2023). This integration can be achieved through a teaching approach that links curriculum content to Islamic values, as well as through teachers' exemplary conduct in their daily attitudes and behaviors (Maulansyah et al., 2023). Thus, the development of teacher resources through strategic planning serves as a crucial foundation for creating a high-quality, integrated educational process that focuses on the holistic development of students' character and competencies.

A number of previous studies have shown that strategic planning plays a significant role in improving the quality and competitiveness of Islamic educational institutions. For example, a study by Saputra et al. found that strategic planning integrated with Islamic values can improve institutional quality through visionary leadership, thorough environmental analysis, and continuous evaluation. A similar finding was also confirmed in a study at MAN 2 Kota Malang, which showed that the implementation of strategic planning based on SWOT analysis contributes positively to the improvement of academic quality and the competitiveness of graduates (Baqi, 2025). However, other studies have shown different results, indicating that strategic planning does not always yield optimal outcomes. Research by Syahid et al. reveals that, in practice, many Islamic educational institutions have not yet adopted strategic planning as the primary foundation of their management, resulting in responses to global challenges that tend to be slow and ineffective (Syahid et al., 2025). This highlights a gap between the ideal concept and its implementation in the field.

In addition, research by Refnawati et al. found that resource constraints (whether in terms of funding, teaching staff, or infrastructure) constitute the primary barriers to the implementation of strategic planning, meaning that the impact on quality improvement has not yet been maximized (Refnawati et al., 2025). This finding is supported by other studies indicating that factors such as resistance to change, a weak organizational culture, and a lack of stakeholder support also hinder the successful implementation of strategies (Fatmawati et al., 2025). Thus, it can be concluded that although strategic planning plays a crucial role in the development of Islamic educational institutions in the global era, its effectiveness depends heavily on the quality of its implementation. The discrepancies in the findings of this study indicate a research gap, namely the need for more in-depth research on effective and context-specific implementation strategies so that strategic planning does not remain merely on paper but is able to have a tangible impact on the development of Islamic educational institutions.

This study is conceptual and based on secondary sources; empirical validation is needed. The exclusion of non-English sources may limit generalizability. The quality of included sources varies, and some may not be peer-reviewed.

D. Conclusions

Based on the overall discussion, it can be concluded that strategic planning is a crucial element in managing and developing Islamic Educational Institutions (LPI) in the global era, as it enables institutions to respond to rapid changes driven by globalization and technological advancement in a structured and sustainable way. The key finding of this study shows that strategic planning not only functions as an administrative tool but also as a transformative framework that guides policy direction, improves resource management, and enhances educational quality. However, LPI still faces multidimensional challenges, including limitations in human resource quality, weak institutional governance, difficulties in integrating Islamic values with modern demands, limited funding, and low graduate competitiveness. These challenges highlight the need for an adaptive and needs-based approach rather than conventional management practices. In terms of practical implications, LPI should implement comprehensive strategic planning that covers curriculum development, co-curricular and extracurricular programs, and continuous teacher competency improvement, while ensuring that Islamic values are integrated with global competencies to produce graduates who are both skilled and morally grounded. Furthermore, institutional leaders are encouraged to strengthen governance systems, build partnerships, and utilize technology to support innovation and sustainability. For future research, it is recommended to conduct empirical studies that examine the effectiveness of strategic planning implementation in various LPI contexts, as well as comparative studies between institutions to identify best practices and measurable impacts on educational quality and graduate outcomes.

E. Acknowledgement

The authors would like to express their sincere gratitude to Universitas Islam Negeri Raden Fatah Palembang for the institutional support and academic environment that greatly contributed to the completion of this research. The authors also extend their appreciation to all parties, colleagues, and contributors who have provided valuable assistance, insights, and encouragement throughout the research process, making this study possible.
